## AI Context Control Center (CCC)

View | Version control

This project is not covered by Drupal's security advisory policy.

The AI Context Control Center (CCC) module provides a way to store, manage, and inject contextual information about a Drupal site or application for use by AI agents. It allows administrators to define a default context, add multiple context entities (each with title, rich text body and taxonomy tags), store everything in Drupal config, and select which context entries agents use based on tag matching. Integrates with the AI Agents module to inject only relevant context into AI workflows.
